Emsisoft Business Security

High-performance antivirus and anti-malware for endpoints.

Dual Engine

4-Layer Protection

Optional: Server Support

FINDING AND REMOVING MALWARE

		Tech Remarks
Virus & Malware Scanning	Dual-engine scanner detects all types of malicious software such as viruses, ransomware, trojans, bots, keyloggers and more.	Emsisoft (A) & Bitdefender (B) engines are combined at the most efficient level; signatures for double-detections are avoided for memory use optimization.
Rootkit Detection	Scans boot sectors and finds hidden rootkits in the operating system.	Optionally use direct disk access mode to scan for infections being hidden by rootkits.
PUP Detection	Optionally alerts users of potentially unwanted programs (PUPs) that overload the computer with resource-hogging applications.	Mostly browsers toolbars, adware and system manipulators.
Advanced Infection Cleaning	Smart operation processes ensure the safety and stability of the computer during system cleaning.	70+ autorun/loading points, restores default values.
Commandline Scanner	The included Emsisoft Commandline Scanner is one of the most sophisticated and flexible command line interfaces in the industry.	Provides top performance with frequent scans, featuring all functions of the GUI version.

PREVENTING NEW INFECTIONS

		Tech Remarks
Layer 1: Web Protection	Blocks access to known fraudulent and dangerous websites.	Fraudulent as in stealing passwords (phishing) and dangerous as in spreading malware downloads.
Layer 2: File Guard	Scans all downloaded and executed files using millions of malware signatures.	3 modes available: Default (scan on execution); Thorough (additionally scan all new created and modified files); and Paranoid (additionally scan all files when read).
Layer 3: Behavior Blocker	Finds brand new malware by monitoring the behavior of all running programs.	Uses live cloud-verification with the Emsisoft Anti-Malware Network database.
Layer 4: Anti-Ransomware	Stops ransomware before it encrypts files.	Many anti-ransomware solutions rely on detection of repeated encryption, so your most valuable files may already be lost before they act.
Prevent Industrial Spying with Behavior Blocker	Customized trojans designed for individual attacks are frequently used to hack businesses, and they are usually not detected by classic antivirus software.	Emsisoft's Behavior Blocking technology is an effective measure against such threats.
Exploit- and System-Manipulation-Prevention	Ensures data integrity and validity of active programs.	Combined detection of code injectors, exe-patchers, hidden rootkits, autoruns, host changers, browser settings changers, group policy changers and invisible installers.
Browser Security	Adds an in-browser security layer to block bad websites without compromising your privacy. Available for Chrome, Firefox and Edge browsers.	Default settings are recommended for most users.

AWARDS & CERTIFICATIONS

CONVENIENCE

		Tech Remarks
Automatic Updates	Detection signatures potentially up to 24 times per day by default.	Protection against more than 500,000 new threats and malicious websites are added every single day.
Scheduled Scans	Optional scan of the whole system at scheduled times.	Highly configurable scheduling, logging, and scan options.

Emsisoft Anti-Malware Network	Optional live cloud-verification of detected threats to sharpen detection and avoid false alerts.	Database with more than 500 million known threats.
Quarantine	Keeps detected objects in a safe, encrypted locker for further investigation before they are finally removed.	Also allows you to submit files to Emsisoft for analysis.
Advanced Logging	Keeps records of all activities from real-time protection, scanner quarantine and updates.	Helpful for support to reproduce events.
Permissions	Set an administrator password or restrict individual users from accessing specific features of the software.	Set default permissions for administrators and non-administrators.
Firewall status display	Overview screen shows current firewall status.	Detects Windows built-in firewall or a third-party product. Allows you to turn the firewall on or off within the software.
Network lockdown	Instantly takes devices offline by clicking the on/off switch.	Can also be enabled remotely from the Cloud Console
Traffic relay	Significantly reduces update traffic volume, accelerates updates and minimizes network congestion.	Only lets data through Emsisoft servers and can't be used to bypass firewalls or proxies for accessing the Internet.
Easy Interface and Configuration	Simple to use yet comes with a range of advanced protection features that are highly configurable.	A beautiful, modern, simple and easy to understand user interface.
Certified Protection	Emsisoft has earned multiple awards and recognition from independent international testing organizations.	Awards and certifications from Microsoft, OPSWAT, AV-Lab, Virus Bulletin, AV-Comparatives and more.
Privacy Conscious	This software does not send user profiles or private data to third-party servers.	Emsisoft is recognized as one of the most privacy-conscious antivirus companies by AV-Comparatives.

DEDICATED BENEFITS

		Tech Remarks
Malware Removal Guarantee	Dedicated malware experts help you remove malware and virus infections in your computer system.	This service is offered at no additional cost.
Technology Guarantee	The built-in update features lets you receive the latest software version within the licensed period at no additional cost.	Emsisoft doesn't just sell software — we are committed to helping keep your computer clean.
Customer Focus	Emsisoft is convinced that treating customers in an honest and respectful manner is the foundation of a sustainable business.	Our dedicated in-house support team replies to messages on time and are committed to providing only the best service to you. We do not outsource our support services.
Personal Assistance	Direct access to specially trained malware removal staff 24/7.	Email: support@emsisoft.com Forum: https://support.emsisoft.com Live Chat: https://help.emsisoft.com

OPTIONAL: EMSISOFT ENTERPRISE SECURITY FOR WINDOWS SERVER

		Tech Remarks
Operate Without User Login	Not dependent on a logged in user to protect your data.	The File Guard begins to operate right from boot time.
Monitor File Shares and Connected Storage Devices	File servers that are heavily risk-exposed are carefully monitored by real-time protection. Any new devices that connect to your server are automatically covered - no action required.	File Guard scans all newly created and modified files.
Email Notifications	Get instant email notifications whenever malicious files are detected, to allow for instantaneous response and further investigation.	
Integrates With Mail Servers	Mail servers that provide virus scanning interfaces can be directly connected via command line calls.	Suggested use of Emsisoft Commandline Scanner.
Saves Your Server's Hardware Resources	Your server's hardware power belongs to your business, not to your antivirus.	Very light on resources

This upgrade enables installation on Windows Server Operating systems and provides optimized protection for unattended servers. An Emsisoft Enterprise Security license plan is required.

System Requirements

OS	For Windows 7 SP1/8.1/10 (Server 2008 R2/2012/2016/2019)	RAM	Minimum 2 GB, ideal 3 GB+
HDD	~1 GB free space needed	CPU	Any x86 or x64
